

Retrieving data from access database – weight 5%

Consider the access database provided to you (see the relevant link in moodle in the section associated with the database). Write a GUI application which enables the user to enter the name of a table in a textbox. Then, the application displays the content of the table row by row in another textbox.

Notice: for marking, you may be asked to demonstrate, explain and apply simple modifications to your code in class. This may impact allocated mark.

Marking criteria:

1. Simple design – 10%
2. Efficient design – 20%
3. Correct output for displaying a table line by line: 40%
4. Correct output for displaying data associated with a given id: 30%

Submission guidelines:

Zip the folder of the project and upload the zipped folder to the relevant link in moodle.
